How to Connect a Steiner Defense M830r Binoculars with a Kestrel 5700 Ballistics/Elite LiNK Unit

Preface:

- Make sure you have a LiNK (i.e. Bluetooth) model Ballistics Kestrel.
- Please update the Kestrel and binoculars to the latest version of the firmware for best results.

Getting Started:

On the Kestrel 5700 unit:

1) Turn on the Kestrel.
2) Press the top left (gear) button to go to the Main Menu.
3) Scroll down to Bluetooth. Make sure it is set to ON. Then click the center button.
4) Make sure Conct is set to Device. Use right arrow to change if not set to Device.
5) Next highlight Name and press the center button. The Kestrel should show "Searching for Devices".

On the Steiner M830r:

1) Press the Power/Measure Button.

On the Kestrel 5700 unit:

6) When you see the device name appear, click on it with the center button.
7) You can rename the device if you want. Highlight Lock and press the right arrow to turn Lock to ON.
8) Exit out using the gear button. A Bluetooth symbol should be showing in the top right of the Kestrel screen.
9) Lase your target and the Kestrel range and inclination angle should get populated.

Please note: there is a minimum distance needed in order for the range to become populated.
